February 28, 2003

To Whom It May Concern:

This letter is written on behalf of Sweeper Metal Fabricator Corporation, located in Drumright, Oklahoma. During the planning, design and construction of the new Grady County Jail, we were introduced to the concept of metal cells. Several companies were explored and ultimately Sweeper was selected for our project.

On our first visit to the plant in Drumright, we found a staff of outstanding individuals who were willing to listen to our concerns and ideas. They willingly took our suggestions and integrated our concepts into the design of the cells. The quality of the product is also to be commended. We could not be happier with the high level of workmanship delivered to our facility.

Because of these factors, I would strongly encourage others who are planning new jail construction, to seriously consider the concept of the metal cells manufactured by Sweeper. I am satisfied, you will find the same level of satisfaction we have here in Grady County.

Respectfully,

Stan Florence  
Sheriff
